Unique fresh water pool solutions

www.enviroswim.com

EnviroSwim is a fresh water system for pools, spa's and water features,
that sanitises water using nature's minerals and oxygen.

Why EnviroSwim?

- Superior fresh water quality.
- Reduced associated running and maintenance costs.
- Independently tested and approved.
- True Eco friendly system.
- Works with any type of pump and filter set-up.
- Backwash to garden without dilution.
- Australian Designed, Patented and Manufactured.

“We have used your ES-3 Model for a few years, and we are very happy with it. The water is very clear and without any odor of chlorine. It is a very easy system to maintain and the installation was easy also. As a bonus we reduced the cost of chemicals and increased the life time on pumps etc. In other words its a win-win situation. Also the service you give us is worth mentioning as it is excellent. Without a doubt, this is a great product for pool sanitising and I will recommend it to all pool owners.”

Environmental Engineer
“The World” cruise ship

“While friends are struggling to keep their pools clean after all the rain here in Brisbane ours is crystal clear!”

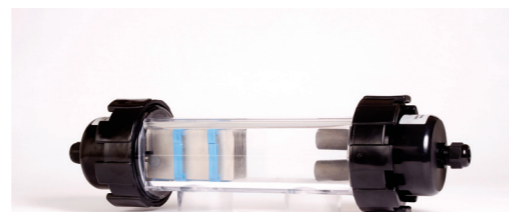

Deborah - Brisbane

ENVIROSWIM

www.enviros swim.com

EnviroSwim eliminates the requirement to add most chemicals including chlorine and cyanuric acid, resulting in exceptional water quality. The system has been independently tested and was certified by NSF International in the USA with testing at NSF headquarters in Ann Arbor, Michigan. The National Sanitising Foundation (NSF) tested rigorously and certified EnviroSwim to Standard 50.

EnviroSwim is being utilized in 1000's of domestic and commercial applications including aquatic centres, resorts, cruise ships and homes.

The EnviroSwim system releases a powerful algacide and bactericide that laboratory tests indicate is 10 times more effective than standard guidelines for disinfection. Water clarity is enhanced by the powerful oxidation unit, which breaks down organic compounds to assist their removal by filtration.

Benefits include the removal and prevention of scale build-up from heat exchangers and other pool equipment, as well as the elimination of offensive Chlorine odours from the water and air around the pool and spa areas.

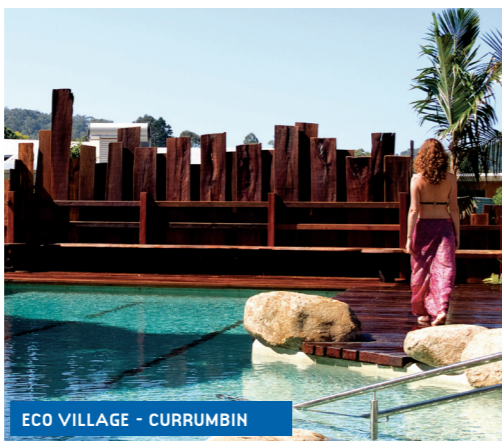

Traditional systems require constant intervention due to their volatility. EnviroSwim's highly stable process allows pools to be left unattended for extended periods. Operating costs, reduced maintenance, improved equipment life and corrosion are all reduced utilizing the EnviroSwim process.

The EnviroSwim system does not produce chemical side effects such as red-eyes, green hair, skin irritation and bleached clothes.

Get the great freshwater feel of EnviroSwim.
